

# Results from day 3

21<sup>st</sup> of April 2021

# Distribution of PDs and associated numbers

# Measurements

- Only three data points per PD: **2mW, 10mW, 15mW**
- **15''** of data for each power
- NOTE: the PCB is different from the one tested yesterday → it is the one **with capacitors**

PD #1

PD #0

Need to repeat this one (probably it was my fault)

PD #3

PD #2

PD #5

PD #4

I will repeat the measurements for PD 4

PD #7

PD #6

PD #9

PD #8

PD #11

PD #10

PD #12

PD #11

I will repeat the measurements for PD 12

PD #16

PD #15

PD #18

PD #17

PD #20

PD #19

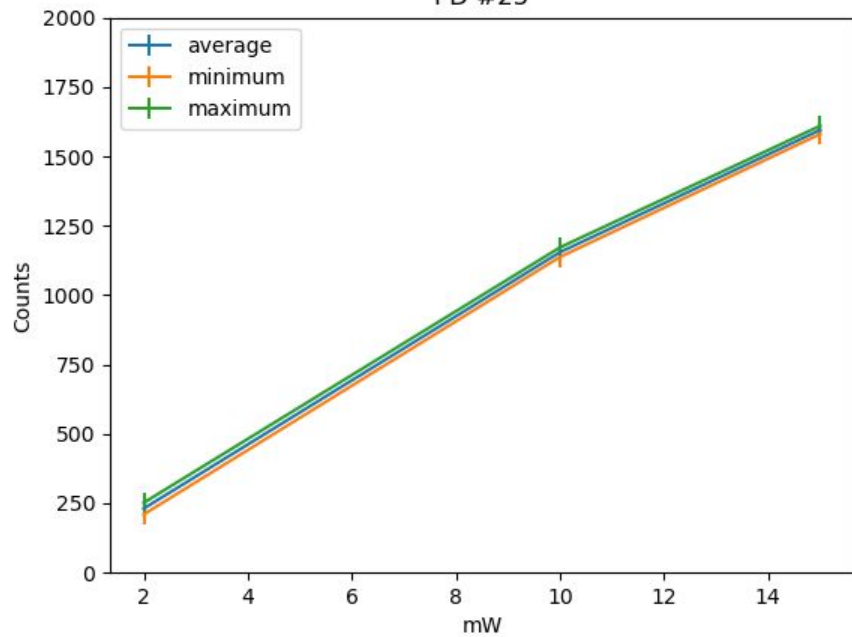

PD #22

PD #21

PD #25

PD #24

PD #27

PD #26

PD #29

PD #28

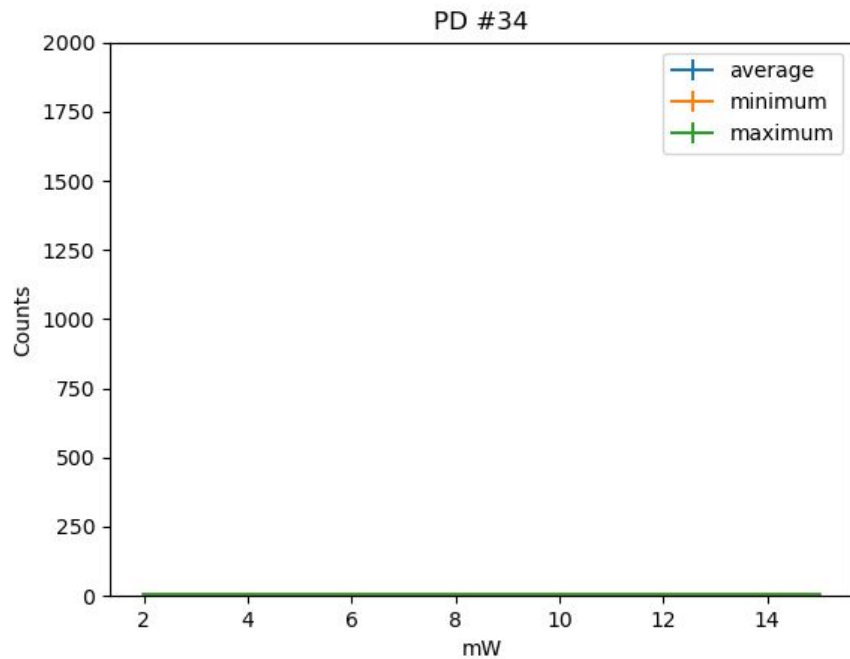

PD #31

PD #30

I will repeat the measurements for PD 34

# Averages of photosensors

# Averages of PDs normalized by the average of the PD#0

Maximum  
difference is of 10%  
(approximately the  
same as yesterday)

# Variations of the average for PD 24 and power 10mW

# Background
